### Measure Your Driver's Bulge & Roll – Krank Precision Gauge

Bulge & Roll are the natural curvatures of a driver face — bulge runs heel-to-toe (horizontal), roll runs crown-to-sole (vertical). Together they create the Gear Effect, straightening off-center hits and optimizing launch.

#### INSTRUCTIONS

- Step 1:** Print at 100% scale (no “Fit to Page”).
- Step 2:** Cut along the dotted lines.
- Step 3:** Hold gauge against your driver face.
- Step 4:** Compare curve to the reference — if it's flatter, bulge & roll may be off.
